SHIVAM SINGH [SHIV]

San Francisco, CA | shivamsi@umich.edu | +1-650-283-3478 | linkedin.com/in/beastofbayarea

EDUCATION

University of Michigan, Stephen M. Ross School of Business — MBA *2022–2024 | Ann Arbor, MI*

Concentrations in Strategy, Technology & Operations; **Wolverine Venture Fund**; Zell Lurie Institute for Entrepreneurial Studies

The London School of Economics — Executive Coursework, Economics, Markets & Public Policy *2024 | London, UK*

Exchange term focused on capital markets, regulatory economics, and quantitative policy analysis

Indian Institute of Technology — B.Tech, Computer Science & Engineering *2010–2014*

Peer-reviewed publication, Journal of Cleaner Production (Elsevier), **159 citations**; distributed systems, algorithms, machine learning

PROFESSIONAL EXPERIENCE

AWS — Principal, Internal Ventures & GenAI Investments *2024–Present | San Francisco, CA*

- Built the investment case for an agentic GenAI shopping assistant: bottom-up market sizing from category attach rates, a **$100M+ GMV** sensitivity model across adoption/attach/frequency scenarios with tornado analysis of the highest-variance drivers, and a milestone-gated funding ask — securing **$5M in internal venture-style funding** against competing portfolio bets.
- Ran the bet like a diligence lead post-investment: defined tranche-release KPIs — adoption 25%, brand favorability 55% → 70%, hallucination rate 2.8%, session depth +15% — commissioned RAG-hardening and HCI redesign workstreams when leading indicators lagged, and greenlit Japan localization (tokenization, honorific handling) only after unit-economics evidence cleared the hurdle — versus the industry norm of funding AI pilots on narrative alone.

Rakuten — Corporate Venture Capital Intern, Investments & Diligence *2023 | Tokyo, Japan*

- Evaluated ecosystem investments and partnership structures across payments, commerce, and AI; ran commercial diligence and take-rate analysis feeding capital-allocation decisions for the group's Japan and cross-border businesses.
- Stress-tested a proposed **$50M** DTC expansion via 10,000-iteration Monte Carlo simulation of CAC, churn, and payback distributions; killed the plan on downside-tail evidence (negative NPV in 68% of paths), redirected capital to a B2B2C corporate-perks motion that moved **LTV:CAC 0.8 → 4.5**, D30 retention 34% → 67%, and payback 18 → 4 months — an estimated **$20M loss avoided**.

Microsoft — Senior Manager, Growth Capital Deployment & Portfolio Management *2020–2022 | Redmond, WA*

- Ran a **$12M co-investment capital program** (Market Development Funds) across a partner portfolio like a fund: Random Forest propensity scoring to rank partner "deals" by expected yield, stage-gated disbursements tied to verifiable milestones, and W-shaped attribution to measure true incrementality of every dollar deployed rather than claimed influence.
- Reallocated capital quarterly from underperforming cohorts to high-conviction partners on yield-table evidence — generating **$50M incremental GMV at 4.1x ROI**, lifting funded-partner conversion 5% → 24%, and compressing sales cycles to 85 days — versus the industry-standard MDF posture of flat, use-it-or-lose-it allocations with no attribution and no clawback.
- Built the reporting cadence a GP would recognize: quarterly portfolio reviews, cohort IRR-style yield tables, and kill / double-down decisions documented in written investment memos with pre-registered success criteria.

The D. E. Shaw Group — Vice President, Capital Formation & LP Relations *2016–2020 | New York & Hyderabad*

- Originated and closed a **$500M mandate** from Kingdom Holding Company (sovereign-adjacent allocator) during peak Brexit uncertainty; owned the end-to-end process — targeting, technical due diligence defense, ICV-sensitive relationship management, and final negotiation with the investment committee.
- Structured a **"1-or-30" risk-reversal fee model** (1% cost-recovery management fee, 30% performance fee above a hard hurdle of RFR +4%), replacing 2-and-20 and aligning GP/LP incentives with skin-in-the-game economics; the structure out-earned the legacy model, generating **$25M in Year-1 performance fees** (2x baseline).
- Converted engineering diligence into commercial leverage: walked the LP's technical team through FPGA kill-switches, GPU-deterministic execution (GPUDirect RDMA, persistent kernels), and a live alpha-decay monitor with auto-deleveraging below 0.6 correlation — turning "black box" objections into the winning differentiator; the platform executed 4,500+ hedges at <0.5 bps slippage, 94% fill rate, and **0% drawdown on Brexit night** while peer systems froze at 50ms+ latencies.
- Aligned six internal constituencies (finance committee, quants, IT, board, legal, trading) behind the deal via a written investment-memo and risk-reversal framework — the same discipline VC investment committees apply to conviction-building.

McKinsey & Company — Associate, Commercial Due Diligence, Private Capital Practice *2014–2016 | London, UK*

- Served PE, fintech, and retail clients on commercial due diligence, pricing strategy, and market-entry business cases; built elasticity (log-log regression) and difference-in-differences models underpinning **>$50M revenue decisions** presented to C-suite investment committees, with **95% forecast accuracy** validated by hindcasting.

INVESTMENT & COMMERCIAL SKILLS

Investing	Sourcing & thesis development, due diligence (technical, commercial, financial), market sizing (TAM/SAM/SOM), unit economics (LTV:CAC, payback, contribution margin, burn multiple), valuation & sensitivity modeling, term sheets, deal structuring, syndication, LP relations, investment memos & IC process, portfolio support, board reporting
Domains	Generative & agentic AI, LLM / RAG applications, fintech & market infrastructure, B2B SaaS, PLG, marketplaces, developer tools
Analytics	Monte Carlo simulation, cohort & retention analysis, propensity modeling, multi-touch attribution, Python, SQL
